DETAILED ACTION

Drawings

Figures 1 and 2 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

Claims 1 and 24 are objected to because of the following informalities: The use of "channel" within the preamble of the subject claims is not patentable constitutes non-statutory subject matter. Suggest deleting or replacing the word to more clearly define the claimed invention. Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6, 16, 19 and 24-26 are rejected under 35 U.S.C. 102(b) as being anticipated by Applicants admitted prior art (Figs. 1 and 2).

Regarding claim 1, Applicants prior art (Fig. 1) discloses a channel for forward transmission of a data comprising:

- a header subframe containing frame mapping information of data to be transmitted to a plurality of terminals (see Fig. 1 which consists of frame mapping information including frame quality indicator and reserve/encoder field R/T),

- data subframes containing data multiplexed therein, and to be transmitted to a plurality of terminals at the present time in correspondence to frame mapping information transmitted in advance (see Fig. 2 which shows a data subframe multiplexed into one superframe for transmission.),

frame mapping information transmitted in advance includes subframe numbers (see Fig. 2, the header subframe which is ahead of the data subframe includes the subframe numbers SFN which are transmitted ahead of the mapping information.).

Regarding claim 2, Applicants prior art (fig. 1) discloses transmitting the mapping information at least n frames in advance (See Fig. 1, shows mapping information being transmitted in advance).

Regarding claims 5, 6 and 26, Applicants prior art discloses subframe numbers, frame quality indicator and R/T information (see Fig. 2).

Regarding claims 3, 4, 19 and 25, Applicants prior art discloses positions of dataframes by their subframe numbers (SFN) (see Fig. 2)

Allowable Subject Matter

Claims 7-15,17,18, 20-23 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

Applicant's arguments with respect to claims 1-26 have been considered but are moot in view of the new ground(s) of rejection.
